This paper describes research in applications of aspect-oriented programming (AOP) as captured in the AspectJ™ language. In particular, it compares object-oriented and aspect-oriented designs and implementations of role models. Sections 1, 2, and 3 provide background information on role models, object-oriented role model implementations, and aspect-oriented programming, respectively. New aspect-oriented designs for role models are explored in sections 4, 5, and 6. ...

The Advanced Teaching and Learning Academic Server (Atlas) is a software system that supports web-based learning. Students can register for courses, and can navigate through personalized views of course material. Atlas has been built according to Sun Microsystem's Java™ Servlet specification using Xerox PARC's aspect-oriented programming support called Aspect™. Since aspect-oriented programming is still in its infancy, little experience with employing this paradigm is currently ...
